***Election/Restrictions***

**1. Restriction is required under 35 U.S.C. 121 and 372.**

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

- Group I, claim(s) 1-3, 11-18, drawn to a method for analyzing an interaction between a sugar chain and a protein in which the protein is immobilized on a substrate.
- Group II, claim(s) 4-6, 23, 25 and 27, drawn to a method for analyzing an interaction between a sugar chain and a protein in which the subject glycoconjugate is immobilized on a substrate.
- Group III, claim(s) 7-10, 14-18, 24, 26 and 28, drawn to a method for analyzing an interaction between a sugar chain and a protein in which a protein that does not react with the sugar chain of a glycoconjugate is immobilized.
- Group IV, claim(s) 19-22, drawn to a method for making a substrate.

**2. The inventions listed as Groups I and II-IV do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:**

The technical feature of the instant claims is the substrate of claim 14; however, this substrate is made obvious by Lee et al (US 2004/0146920).

Lee discloses a photoresist film coated on a glass substrate. The photoresist film is patterned by photolithography to form spot regions. A microarray thus prepared was incubated in a UV-Ozone cleaner for one hour and then activated so that the spot regions have --SiOH groups. The activated spot regions were filled with a 3% toluene solution of 3-glycidioxypropyl trimethoxysilane and then incubated at room temperature for one hour. See paragraph [0038]. The array thus form is bound to protein probes via the aldehyde end group. See paragraph [0027]. The probes can be proteins, nucleotides, polysaccharides, etc. See paragraph [0034].

3. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
